

AMENDMENTS

IN THE CLAIMS

1. (currently amended) Server for offering an internet portal comprising a menu comprising menu-items and linked sub-menu items to a mobile terminal comprising

- a transmitting module for transmitting a portal signal to said terminal, which portal signal comprises menu-item signals each for displaying at least a part of a menu-item on a display of said terminal, with said portal signal comprising said menu-item signals being stored in said server, and

- a receiving module for receiving an activation signal from said terminal for activating a menu-item, which activation signal comprises a menu-item code defining a menu-item,

wherein at least some of said menu-items each are linked to at least two sub-menu-items, with said server comprising

- a generating module for generating, in response to a first menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item linked to ~~of~~ a first menu-item on said display, and for generating, in response to a second menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item linked to ~~of~~ a second menu-item on said display, with at least most of said sub-menu-items of said first menu-item being personalized, and with at least most of said sub-menu-items of said second menu-item being non-personalized.

2. (previously amended) Server according to claim 1, wherein said server comprises

- an addressing module for, in response to a receive from said terminal of a further activation signal comprising a sub-menu-item code defining a sub-menu-item, addressing a service provider for coupling said terminal to said service provider.

3. (previously amended) Server according to claim 1, wherein server comprises

- a supplying module for, in response to a receive from said terminal of a further activation signal comprising a sub-menu-item code defining a sub-menu-item of a third menu-item, supplying time-dependent information stored in said server from said server to said terminal.

4. (previously amended) Server according to claim 2, wherein server comprises

- a supplying module for, in response to a receive from said terminal of a further activation signal comprising a sub-menu-item code defining a sub-menu-item of a third menu-item, supplying time-dependent information stored in said server from said server to said terminal.

5. (previously amended) Server according to claim 1, wherein said server comprises

- an adjusting module for, in response to a receive from said terminal of a further activation signal comprising a sub-menu-item of a fourth menu-item, allowing adjustment of user-dependent information stored in said server in dependence of a receive of an adjustment signal originating from said terminal.

6. (previously amended) Server according to claim 2, wherein said server comprises

- an adjusting module for, in response to a receipt from said terminal of a further activation signal comprising a sub-menu-item of a fourth menu-item, allowing adjustment of user-dependent information stored in said server in dependence of a receipt of an adjustment signal originating from said terminal.

7. (previously amended) Server according to claim 3, wherein said server comprises

- an adjusting module for, in response to a receipt from said terminal of a further activation signal comprising a sub-menu-item of a fourth menu-item, allowing adjustment of user-dependent information stored in said server in dependence of a receipt of an adjustment signal originating from said terminal.

8. (previously amended) Server according to claim 1,

wherein five menu-items offer time-dependent information, personalized services, non-personalized services, adjustment of user-dependent information and help, in this particular order on said display.

9. (previously amended) Server according to claim 2,

wherein five menu-items offer time-dependent information, personalized services, non-personalized services, adjustment of user-dependent information and help, in this particular order on said display.

10. (previously amended) Server according to claim 3,

wherein five menu-items offer time-dependent information, personalized services, non-personalized services, adjustment of user-dependent information and help, in this particular order on said display.

11. (previously amended) Server according to claim 4,

wherein five menu-items offer time-dependent information, personalized services, non-personalized services, adjustment of user-dependent information and help, in this particular order on said display.

12. (currently amended) Access provider comprising a network-unit coupled to a server for offering an internet portal comprising a menu comprising menu-items and linked sub-menu items to a mobile terminal and comprising

- a transmitting module for transmitting a portal signal to said terminal via said network-unit, which portal signal comprises menu-item signals each for displaying at least a part of a menu-item on a display of said terminal, with said portal signal comprising said menu-item signals being stored in said server, and

- a receiving module for receiving an activation signal from said terminal via said network-unit for activation a menu-item, which activation signal comprises a menu-item code defining a menu-item,

wherein at least some of said menu-items each are linked to at least two sub-menu-items, with said server comprising

- a generating module for generating, in response to a first menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item linked to ~~of~~ a first menu-item

on said display, and for generating, in response to a second menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item linked to ~~of~~ a second menu-item on said display, with at least most of said sub-menu-items of said first menu-item being personalized, and with a least most of said sub-menu-items of said second menu-item being non-personalized.

13. (previously amended) Access provider according to claim 12, wherein said access provider comprises

- an addressing module for, in response to a receival from said terminal via said network-unit of a further activation signal comprising a sub-menu-item code defining a sub-menu-item, addressing a service provider for coupling said terminal to said service provider via said network-unit.

14. (previously amended) Access provider according to claim 12, wherein said access provider comprises

- a supplying module for, in response to a receival from said terminal of a further activation signal comprising a sub-menu-item code defining a sub-menu-item of a third menu-item, supplying time-dependent information stored in said server from said server to said terminal via said network-unit.

15. (previously amended) Access provider according to claim 13, wherein said access provider comprises

- a supplying module for, in response to a receival from said terminal of a further activation signal comprising a sub-menu-item code defining a sub-menu-item of a third menu-item, supplying time-dependent information stored in said server from said server to said terminal via said network-unit.

16. (previously amended) Access provider according to claim 12, wherein said access provider comprises

- an adjusting module for, in response to a receival from said terminal via said network-unit of a further activation signal comprising a sub-menu-items code defining a sub-menu-item of a fourth menu-item, allowing adjustment of user-dependent information stored in said server in dependence of a receival of an adjustment signal originating from said terminal via said network-unit.

17. (previously amended) Access provider according to claim 13, wherein said access provider comprises

- an adjusting module for, in response to a receival from said terminal via said network-unit of a further activation signal comprising a sub-menu-items code defining a sub-menu-item of a fourth menu-item, allowing adjustment of user-dependent information stored in said server in dependence of a receival of an adjustment signal originating from said terminal via said network-unit.

18. (previously amended) Access provider according to claim 14, wherein said access provider comprises

- an adjusting module for, in response to a receival from said terminal via said network-unit of a further activation signal comprising a sub-menu-items code defining a sub-menu-item of a fourth menu-item, allowing adjustment of user-dependent information stored in said server in dependence of a receival of an adjustment signal originating from said terminal via said network-unit.

19. (previously amended) Access provider according to claim 12, wherein five menu-items offer time-dependent information, personalized services, non-personalized services (+20), adjustment of user-dependent information and help, in this particular order on said display.

20. (previously amended) Access provider according to claim 13, wherein five menu-items offer time-dependent information, personalized services, non-personalized services, adjustment of user-dependent information and help, in this particular order on said display.

21. (previously amended) Access provider according to claim 14, wherein five menu-items offer time-dependent information, personalized services, non-personalized services, adjustment of user-dependent information and help, in this particular order on said display.

22. (currently amended) Method of offering an internet portal comprising a menu comprising menu-items linked to sub-menu items to a mobile terminal and comprising the steps of

- transmitting a portal signal to said terminal, which portal signal comprises menu-item signals each for displaying at least

- a part of a menu-item on a display of said terminal, with said portal signal comprising said menu-item signals being stored in a server, and

- receiving an activation signal from said terminal for activating a menu-item, which activation signal comprises a menu-item code defining a menu-item,

wherein at least some of said menu-items each are linked to at least two sub-menu-items, with said method comprising the step of

- generating, in response to a first menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item linked to of a first menu-item on said display, and for generating, in response to a second menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item linked to of a second menu-item on said display, with at least most of said sub-menu-items of said first menu-item being personalized, and with at least most of said sub-menu-items of said second menu-item being non-personalized.

23. (currently amended) Processor program product to be run via a server for offering an internet portal comprising a menu comprising menu-items linked to sub-menu items to a mobile terminal and comprising

- a transmitting function for transmitting a portal signal to said terminal, which portal signal comprises menu-item signals each for displaying at least a part of a menu-item on a display of said terminal, with said portal signal comprising said menu-item signals being stored in said server, and

- a receiving function for receiving an activation signal from said terminal for activating a menu-item, which activation signal comprises a menu-item code defining a menu-item, wherein at least some of said menu-items each are linked to at least two sub-menu-items, with said processor program product comprising

- a generating function for generating, in response to a first menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item linked to of a first menu-item on said display, and for generating, in response to a second menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item linked to of a second menu-item on said display, with at least most of said sub-menu-items of said first menu-item being personalized, and with at least most of said sub-menu-items of said second menu-item being non-personalized.

24. (currently amended) Mobile terminal for use in combination with a server for offering an internet portal comprising a menu comprising menu items linked to sub-menu items to said mobile terminal and comprising

- a transmitting module for transmitting a portal signal to said terminal, which portal signal comprises menu-item signals each for displaying at least a part of a menu-item on a display of said terminal, with said portal signal comprising said menu-item signals being stored in said server, and

- a receiving module for receiving an activation signal from said terminal for activating a menu-item, which activation signal comprises a menu-item code defining a menu-item, wherein at least some of said menu-items each are linked to at least two sub-menu-items, with said server comprising

- a generating module for generating, in response to a first menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item linked to of a first menu-item on said display, and for generating, in response to a second menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item linked to of a second menu-item on said display, with at least most of said sub-menu-items of said first menu-item being personalized, and with at least most of said sub-menu-items of said second menu-item being non-personalized.

25. (currently amended) Portal signal for offering an internet portal comprising a menu comprising menu-items linked to sub-menu items via a server comprising

- a transmitting module for transmitting a portal signal to a mobile terminal via said network-unit, which portal signal comprises menu-item signals each for displaying at least a part of a menu-item on a display of said terminal, with said portal signal comprising said menu-item signals being stored in said server, and

- a receiving module for receiving an activation signal from said terminal via said network-unit for activating a menu-item, which activation signal comprises a menu-item code defining a menu-item,

wherein at least some of said menu-items each are linked to at least two sub-menu-items, with said server comprising

- a generating module for generating, in response to a first menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item linked to of a first menu-item on said display, and for generating, in response to a second menu-item code, sub-menu-item signals each for displaying at least a part of a sub-menu-item linked to of a second menu-item on

said display, with at least most of said sub-menu-items of said first menu-item being personalized, and with at least most of said sub-menu-items of said second menu-item being non-personalized.
